Radon Gas Causes More Than 20,000 Lung Cancer Deaths in the Country Each Year

Champaign-Urbana Public Health District Encourages Citizens to Test Their Homes with Free Radon Test Kit

CHAMPAIGN, IL – January is National Radon Action Month and the Champaign-Urbana Public Health District (CUPHD) encourages citizens to learn more about the threat of radon and to test their homes for the presence of radon. CUPHD has a limited number of FREE radon test kits available for residents of Champaign County. Test kits may be picked up at the Environmental Health Division of CUPHD located at 201 West Kenyon Road in Champaign; kits are available Monday through Friday from 8:00 AM to Noon and 1:00 to 4:00 PM. Test kits are available while supplies last.

According to the Centers for Disease Control and Prevention (CDC), exposure to indoor radon is the leading cause of lung cancer among non-smokers and the second leading cause of lung cancer in the United States.

Radon is a naturally occurring radioactive gas released into the air from decaying matter in rocks, soil and water. While levels in outdoor air are relatively harmless, radon can accumulate to dangerous levels inside buildings. Radon is an invisible threat; it cannot be seen, smelled or tasted. The only way to detect radon is to perform a radon test.

- more -

The free test kits provided by CUPHD are safe and easy to use. Simply open the test kit, and place the radon detector in a designated area in the home for a minimum of 48 hours, with windows and doors closed. After 48 hours, place the detector in the enclosed postage-paid envelope and send it to a lab for a free analysis. The lab will then inform you of your radon test results.

Radon is measured in picocuries per liter of air (pCi/L). The EPA recommends that homes with radon levels of 4 pCi/L or higher should be mitigated. The national average home reading is about 1.3 pCi/L. The average outdoor reading is about 0.4 pCi/L.

Radon presents a serious health risk, but it can be controlled easily and cost effectively. If a high radon level is detected in your home, you can take steps to fix the problem to protect yourself and your family. Test your home and protect your health today.

For more information on radon or free radon test kits for Champaign County residents, please contact CUPHD at (217) 373-7900 or visit CUPHD on the web at www.c-uphd.org/radon-detection.html.
